

Databricks Data Camp

FOR BUSINESS USERS

A hands-on, story-driven lab series that turns business analysts into a self-service data team - from raw data to a governed, data-driven decision on the Databricks Platform. Some SQL helps; no engineering background needed.

The scenario that carries the journey

Participants become the new CEO of "Databricks Retail Corp." - a merch shop that has never used Databricks on its own data. Their mission: decide which product category to promote next quarter, backed by real evidence (sales, a forecast, marketing ROI, external research). Every lab advances that decision, so skills land in a business context people remember.

The format

8 self-paced labs as guided Databricks notebooks - run in order.

UI-first & business-friendly: click-through Databricks UI; code only where there's no UI path (clearly marked optional).

One-click setup: a single deploy script provisions everything; automated permission & prerequisite checks flag exactly what's needed.

Safe & repeatable: synthetic data, graceful fallbacks, and a clean-up lab that resets the environment for the next cohort.

Delivery: self-guided, instructor-led, or hackathon warm-up - approx. half a day end to end.

What participants build (the 8 labs)

Lab	What they do	Databricks capability
0 • Setup	Deploy assets, check permissions & previews	Unity Catalog
1 • Ingest	Connect the operational source system	Lakeflow Connect, Lakebase
2 • Discover	Explore & document data three ways	Unity Catalog, Genie, Domains
3 • Transform	Build clean silver & gold tables	Lakeflow Designer, medallion
4 • KPIs	Define shared metrics once, for all	Metric Views
5 • Decide	Ask questions, forecast, weigh evidence	Genie Spaces, ai_forecast()
6 • Visualize	Track the decision on live dashboards	AI/BI Dashboards
7 • Clean up	Reset the workspace for the next run	Governed lifecycle

What your team walks away able to do

Find & trust data with Unity Catalog, Genie, and business domains.

Turn raw tables into business-ready KPIs with a visual, no-code pipeline.

Define revenue, profit, cost & marketing ROI once - one source of truth every dashboard and Genie answer shares.

Ask questions in plain English, forecast next quarter, and validate a hand-off instead of trusting it blindly.

Build & share AI/BI dashboards the whole company tracks daily.

Who it's for: business analysts, operations & finance teams, and any data-curious business user who knows a little SQL. Ideal as an onboarding accelerator, a pre-hackathon primer, or a proof-of-value that lands the lakehouse story with a non-technical audience.
